

Construction Waste Management Database

Nationwide

Project Data:

Online Searchable Database

Steven Winter Associates, Inc. (SWA) staff worked with GSA's Office of Applied Science to modify and update a database of construction waste recycling companies. The CWM Database is an on-line searchable database of U.S. companies that recycle various construction waste products. SWA's tasks included improving functionality, moving the database to the Whole Building Design Guide website ([wbdg.org](http://www.wbdg.org)), updating the list of materials recycled, contacting companies and recruiting recyclers, developing promotional materials, and increasing the visibility of the site.

Construction Waste Management Database

Client: U.S. General Services Administration

Location: Nationwide

Project Status: Completed
